

IT'S HOW WE PLAY TOGETHER

www.dynamoplaygrounds.com

MAIN BODY COMPOSITION

Designed for indoor and outdoor use; the main body of the play units consist of a soft rubber coating adhered to a fibreglass shell. This composition creates a safe user experience combined with a long product life.

RUBBER COATING COMPOSITION

The rubber coating is made from Ethylene Propylene Diene Rubber (EPDM) and Styrene Butadiene Rubber (SBR) pellets which are bound together creating a smooth unitary surface. The pellets are unified using an aliphatic polyurethane (PU) binder.

FIBREGLASS SHELL

The hollow fibreglass shell is manufactured to be vandal-resistant and strong.

COLOURS

The vibrant colour schemes and playful graphics create an inviting addition to any play space. The colours are made to be UV stable capable of withstanding outdoor use.

INSTALLATION

The simple design makes installation fast and efficient.

SAFETY SURFACING

The play units are designed to require minimal safety surfacing depth.
